## PLAY-DOUGH BRAIN

This activity can help as a visual aid when explaining a brain tumor to a child.

1. Choose two colors of play-dough. One color will represent healthy brain cells. The other color will represent tumor cells.
2. Make small balls of the healthy color and place them all over a picture of a brain.
3. Make smaller balls of the tumor color and clump them all in one region on the brain picture. This will explain visually that tumor cells grow together.
4. Explain that tumor cells crowd healthy brain cells
